

User_profile API Documentation

User create API :-

API : - http://127.0.0.1:8000/user_create

below field is required for the user create:

```
fields = ['email', 'username', 'password', "confirm_password", "first_name", "last_name", "profile_image", "phone_number", "designation", "date_of_birth"]
```

- While create user profile in the serializers.py we compress image size below 1 mb. Also compare password and confirm_password.

User login API:-

API:- <http://127.0.0.1:8000/login/>

-When user try to login with username and password first check user credentials and after authenticate user and give token in response

Update user API:-

API :- http://127.0.0.1:8000/update_user/<user_id>

- Using this API update user profile and also compress update image size below 1 mb. Also manage login user is only update own profile.

Delete User API:-

API :- http://127.0.0.1:8000/delete_user/<user_id>

Using this API delete user profile manage login user is only delete own profile. Also here manage soft delete functionality.
